Course-End Project Problem Statement

Get Certified. Get Ahead.

Course-End Project 2: Comparison of Region Based on Sales

Problem Scenario:

The director of a leading organization wants to compare the sales between two regions. He has asked each region operators to record the sales data to compare by region. Upper management wants to visualize the sales data using a dashboard to understand the performance between them and suggest the necessary improvements.

Objective:

Help the organization by creating a dashboard to visualize the sales comparison between two selected regions.

Datasets:

Sample Superstore

Steps to Perform:

1. Select Sample Superstore as Dataset
 - 1.a. Use Sample Superstore Dataset
 - 1.b. Select Data
 - 1.c. Use Group by from Data Source Table on a Folder to create a folder to segregate the required data
2. Create a hierarchy called Location
3. Create two parameters: Primary Region and Secondary Region with all regions listed in them.
 - 3.a. Create Parameters for Primary Region and Secondary Region
 - 3.b. Create a Calculated Field for both Primary Region and Secondary Region

Give name as **Filter: Primary Region**. Type the given code:

```
IF [Region] = [Primary Region] THEN "True"  
ELSE "False"  
END
```

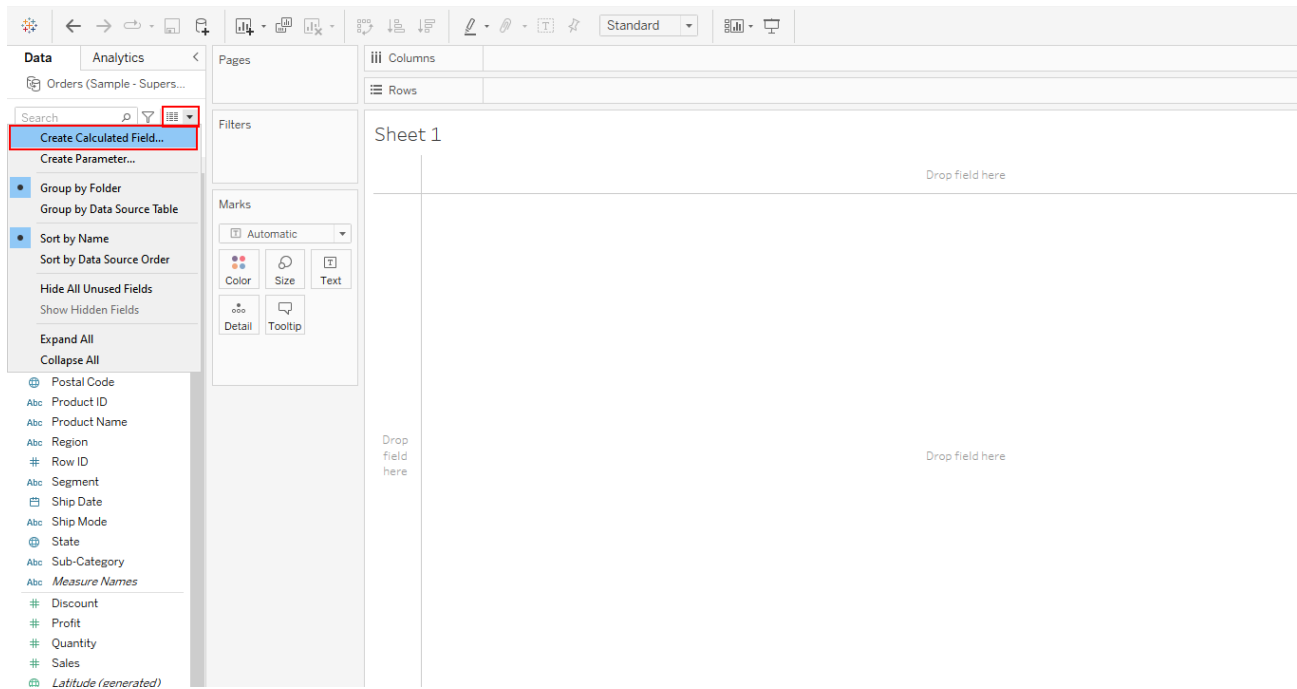

Also, create another name as **Filter: Secondary Region**. Type the given code:

```
IF [Region] = [Secondary Region] THEN "True"  
ELSE "False"  
END
```

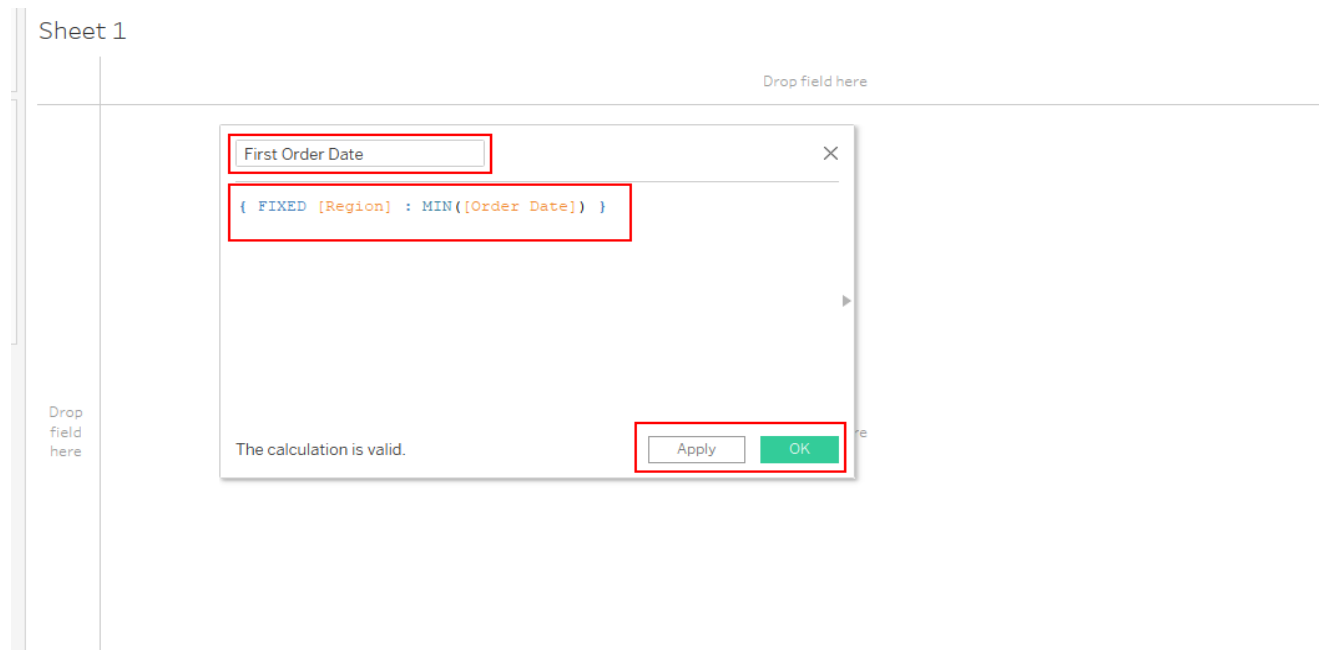

4. Create a First Order Date

4.a. Create a Calculated Field and name it the First Order Date

Write the following command:

{FIXED [Region] : MIN ([Order Date]) }

5. Create a dashboard

5.a.Align all sheets in the dashboard

6. Partition the dashboard to display the below details of Primary Region and Secondary Region

- 6.a. First Order Date
- 6.b. Total Sales
- 6.c. Average Sales per Order
- 6.d. No of Customers
- 6.e. No of Orders
- 6.f. No of Products in Sale

Sample Output:
